

## Insect Facts

1. Cockroaches can live up to 1 week without a head.
2. Ladybugs make a chemical that smells and tastes terrible so that predators won't eat them.
3. Most insects have wings. Fleas, lice, silverfish, and firebrats are the only truly wingless insect groups that most of us are familiar with.
4. More Americans die each year from bee stings than from snake bites.
5. Only full-grown male crickets can chirp.
6. There are more than 2,700 types of mosquitos worldwide.
7. There are more beetles than any other kind of creature in the world.
8. Living scorpions reflect ultraviolet light and can glow with an eerie greenish color when exposed to UV light.
9. The venom of a female black widow spider is more potent than that of a rattlesnake.
10. Ants can lift 50 times their own weight.
11. Flat worms called planarians, are a worm-like organism that can split in half to produce two new worms – this is a form of asexual reproduction.
